

THE CORACLE NET

Traditionally cow's tails were used to make the nets. Coraclers would go to the slaughterhouse to get the tails and sawn-off cow's horns.

The hair and the horns that came from the slaughterhouse were covered in muck and blood.

Brothers Raymond & Brian Rees with their grandfather, William Elias, spinning the cow's tail to make coracle nets.

Photos taken years apart showing the son working in the same way as his father.

Father and son expertly measuring the gaps in the net.
